TVersity is a Digital Living Network Alliance (DLNA) media server application that is installed directly on a Windows computer and allows streaming of media files (music, photos, or videos) across the network to any DLNA-certified device including the Sony PlayStation 3 (PS3) game console. This guide explains how to configure the TVersity media server to stream media from a PC-connected Drobo® or Drobo S to a PS3.

**System Requirements**

- Drobo or Drobo S storage array
- Windows XP, Windows 2003, Windows Vista or Windows 7 computer
- Windows Media Player 9.0 or higher
- Microsoft DirectX 9.0 or higher
- TVersity media server v1.9.3 or higher
- Sony PlayStation 3 game console
- Wired or wireless network connecting devices

**STEP 1**

Visit the TVersity website [http://www.tversity.com/download/] to download and install the latest version of the TVersity media server application.

**NOTE:** During installation, TVersity will prompt you for system configuration settings and web content subscriptions. This document assumes that default options are selected.
STEP 2
If you’ve already created media folders on your Drobo, you can skip to Step 4. Otherwise, navigate to a mounted Drobo or Drobo S volume and create three new folders titled **Music**, **Photos**, and **Videos**.

STEP 3
Once you’ve created these folders, add all desired media you wish to share into each folder respectively. In this example the song *Silent Night* was added to the **Music** folder.
STEP 4
Open the newly installed TVersity media server application and configure the new folders on your Drobo device. Select **Add Folder > Drobo > Music > Open** for each folder (Music is shown in this example).

![Image of TVersity media server interface with Music folder selected]

STEP 5
Locate your Drobo from the list of available folders and drives and select `<Drobo> > Open` where `<Drobo>` is the name of your Drobo volume. A window that shows available folders on your Drobo is displayed. Select **Music > Open** and repeat this step for the Photos and Video folders.

STEP 6
Go to the PlayStation 3 (PS3) dashboard and navigate to Music, Photos, or Videos depending on the type of media you wish to view or play. The TVersity media server should be visible.

NOTE: If you don’t see the TVersity media server, select Search for Media Servers and it will appear.

STEP 7
Recently added media from your Drobo should be visible in the TVersity media server on the PS3 dashboard. Select the item you want to play or view. In the example below, we selected the song Silent Night from the Music category. You are now streaming media from your Drobo to your PS3. Enjoy!
